

## **README FILE**

This file explains the data and do-files used in the analysis for the paper “The effect of cash, vouchers and food transfers on intimate partner violence: Evidence from a randomized experiment in Northern Ecuador.”

### **Do-files**

There are two dofiles. The first takes the raw data and creates a dataset (DV\_baseline\_followup.dta) at the individual level for women who responded to IPV model at baseline and endline. The second takes the dataset “DV\_baseline\_followup.dta”, creates variables needed for analysis, and constructs tables and graphs for the paper.

1. Construction of DV database for analysis jan2016: This do-file was created to construct the dataset for IPV analysis. It uses de-identified raw data from baseline and follow-up, combines section T (IPV module) with individual data for women responding to the IPV section, and creates some control variables.
2. DV analysis AEJ final jan2016: This do-file creates variables, tables, and graphs for AEJ paper. Tables and graphs created are exported to folders called “Tables” and “Graphs”.

### **Data:**

Raw data used to construct analysis dataset can be found in the following folders:

- Data\Baseline
- Data\Follow-up
- Data\Other

Dataset used for analysis (DV\_baseline\_followup.dta) can be found in following folder:

- Data
